Application Overview

In many organizations, the groups responsible for tax mega processes operate independently. This forces them to move data across departments manually. Not only is this inefficient and time consuming, but it increases the risk of errors.

In order to integrate the processes within multiple departments of the organizations, TaxFunction's set of Tools and Resources helps make this integration as seamless as possible. Each department can work independently, while working from the same data set.

TaxFunction.com is a web application for managing legal entity records and using those records for tax calculations and other related purposes. The application stores notes and attachments for such records and caters primarily to US states with partial support for other countries as well.

Solution Developed

The development team at SoftProdigy worked on several modules for the back-end administration interface of TaxFunction.com. After understanding the client's project requirements and detailed analysis of the front-end system, SoftProdigy developed certain modules in ASP.NET using Telerik controls. Also added were certain custom functionality in the default Telerik controls. Reason for going with Telerik was because of the full-featured collection of controls which are easy to use, simple to customize and robust at the same time.

Some of the major features of the solution developed included features like:

Interface Design- A simple and minimalistic design was created and implemented. Leveraging Telerik's power of full control over design and mark-up, a clean layout was developed. The layout was formatted so as to make it easy for users to quickly and easily navigate through the application.

Telerik Controls & Customizations- Various Telerik controls like: RadGrid, RadTreeview, RadWindow, RadTooltip etc. were used to develop the back-end modules. The Telerik controls were further customized according to the project requirements.

Reporting- All the financial data entered into the system can be exported as PDF or Excel reports via the integrated reporting system.

Multi-User Support- The single system works as a source of legal entity and tax records management for multiple enterprises. This has been ensured by building the system from ground up in a manner that handles scalability as the users increase.

Benefits

Tax Function helps in easy maintenance of information and tax calculation through its suite of online tools and reporting solutions. Utilizing adaptive web-based technologies TaxFunction offers a solution to the clients that advances with technology and does not require frequent upgrades to software. This solution is backed up by the most recent and stringent security protocols.

With an integrated solution like TaxFunction, clients can focus on putting the data to work, not letting the data be the work.

The benefits provided by the solution delivered included:

Easy Calculations – The system provides simple and automatic calculation of complex data, helping in saving huge amount of time and effort for emerging to mid-level organizations.

Informative Listing – The system provides listing of records in a manner which is useful in calculations and understanding.

Data Reporting– The system provides easy and efficient way to export the data in Excel and PDF formats.

Easy Data Manipulation – The system provides an easy and dynamic way of maintaining information.

About SoftProdigy

Founded in 2006, SoftProdigy is an award-winning organization with expertise in the areas of Web & Mobile Technologies and Consulting services.
